作业 9

自 02 彭程 2020011075

1. 结果说明如下:

初始设定:

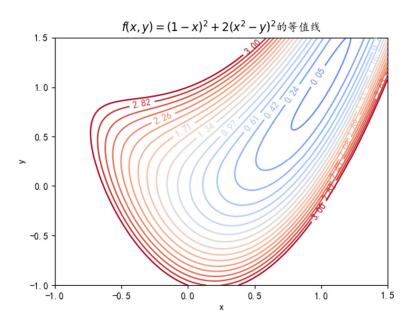

初始步长 t0 = 2

alpha=1.3, m1=0.2, m2=0.8

搜索结果: 步长: 2 最优点: x = -1.1415926535897931, y = -0.25768053346058895

2. 结果说明如下:

首先对函数与其导数进行构建,之后可以绘制出函数的等值线如下所示:

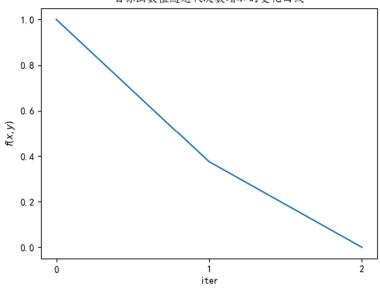

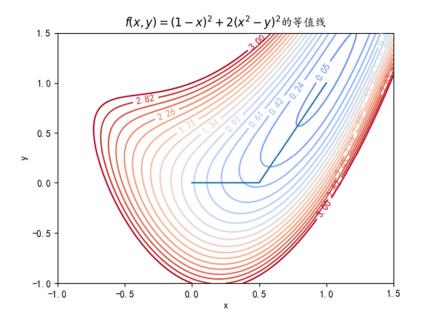

绘制出不同算法函数值随迭代次数增加的变化曲线,以及迭代过程中决策变量在等值线上的变化曲线如下:

Fletcher-Reeves 共轭梯度法:

F-R: 迭代次数:2 最优解:([1.],[0.99999984]) 最优目标值:[5.05422177e-14]

Polak-Ribiere 共轭梯度法:

P-R: 迭代次数:2 最优解:([1.],[1.00000009]) 最优目标值:[1.8195477e-14]
